Professional Summary

Aspiring Full-Stack Developer with hands-on experience building web applications and AI-powered projects. Passionate about solving real-world problems through technology and building practical solutions. Currently strengthening my skills in AI development, backend engineering, and AWS deployment, while seeking opportunities to collaborate with teams and contribute to real-world projects.

Education

Sahyadri College of Engineering and Management
Bachelor of Engineering in Computer Science & Engineering

2023 – Present
CGPA: 9.34

Personal Projects

ArchStudio AI *FastAPI, RAG, Supabase, n8n, Groq*
Live Demo: <https://13.127.76.144/>

2026

- Developed an authenticated engineering workspace that transforms software repositories into searchable knowledge bases for architecture exploration and code understanding.
- Implemented a RAG pipeline with semantic code search, code ingestion, and project-scoped retrieval to deliver grounded AI responses with file-level evidence.
- Built asynchronous AI workflows that generate architecture analysis, technical reports, database diagrams, and evidence backed codebase chat from uploaded repositories.

TokenPilot *FastAPI, React, PostgreSQL, Docker*
Live Demo: <http://65.0.146.12/>

2026

- Built a multi-tenant AI workspace with persistent conversations, code-focused workflows, configurable AI providers, and organization-based user roles.
- Developed an AI request pipeline that optimizes prompts, conversation context, documents, and code while estimating token usage and selecting relevant information.
- Implemented exact and semantic response caching to reduce repeated AI provider requests and improve application efficiency.

TradeLeague *Django, DRF, Django Channels, Docker*
Live Demo: <https://tradeleague-8w55.onrender.com/>

2026

- Developed a head-to-head virtual trading league with authenticated users, private and public game rooms, timed matches, and room-based investments.
- Implemented profit and loss settlement based on asset growth, risk, and match duration, with automated tracking of balances, performance, wins, and game history.
- Built market analysis, investment validation, performance dashboards, and leaderboard features to help users evaluate trading strategies and compete with other players.

Technical Skills and Interests

Languages:	Python, Java, HTML, CSS, JavaScript
Developer Tools:	VS Code, Git/GitHub, Docker, Render, AWS
Frameworks & Libraries:	React.js, Django, Django REST Framework, FastAPI
Databases:	MongoDB, PostgreSQL, SQLite
Testing:	Postman, pytest
Areas of Interest:	Full Stack Development, AI Engineering

Certifications & Achievements

- Selected among the top teams during the internal selection round for Smart India Hackathon (SIH).
- **Basics of Python** — *Infosys Springboard* (Jun 2025)
