Professional Summary

Computer Science undergraduate with a strong foundation in Python, backend development, and AI. Experienced in building full-stack applications using FastAPI, Django, React, PostgreSQL, and Docker. Built projects involving AI integrations, RAG, real-time systems, REST APIs, and databases. Looking for an opportunity to apply my skills and grow as a software or AI engineer.

Education

Sahyadri College of Engineering and Management
Bachelor of Engineering in Computer Science & Engineering

2023 – Present
CGPA: 9.34

Projects

TokenPilot *FastAPI, React, PostgreSQL, Docker*
Live Demo: <http://65.0.146.12/>

2026

- Built a multi-tenant AI workspace with configurable integrations across 8 AI providers—including OpenAI-compatible APIs, Gemini, Anthropic, Groq, OpenRouter, DeepSeek, Mistral, and xAI—using a shared adapter architecture, JWT authentication, OTP verification, and role-based access control across company/employee hierarchies.
- Engineered a deterministic prompt-optimization pipeline handling context selection, PDF/DOCX parsing, and code/dependency detection while tracking estimated token usage and request latency.
- Implemented exact and semantic tenant-scoped response caching with private/global tiers and single-flight request coalescing, with tests demonstrating avoided redundant provider calls; deployed with Docker on AWS.

ArchStudio AI *FastAPI, RAG, Supabase, n8n, Groq*
Live Demo: <https://13.127.76.144/>

2026

- Built a RAG-powered engineering workspace that accepts ZIP archives and public GitHub repositories, processes source code, redacts common secrets, and generates line-aware Sentence Transformers embeddings stored in Supabase pgvector.
- Delivered project-scoped semantic search and AI chat with file- and line-level evidence, plus automated architecture, dependency, code-quality, security, and performance analysis using retrieved repository context and Groq.
- Built editable report and diagram generation workflows with local export support for reports in PDF/DOCX and diagrams in SVG/PNG/PDF, containerized with Docker Compose, Nginx, and optional n8n orchestration.

TradeLeague *Django, DRF, Django Channels, Docker*
Live Demo: <https://tradeleague-8w55.onrender.com/>

2026

- Built a real-time head-to-head virtual trading game with Django Channels, supporting room-scoped WebSocket messaging, private/public rooms, and 5-, 10-, and 15-minute matches.
- Implemented a deterministic P&L simulation engine using seeded randomness, asset growth, risk-based volatility, and duration-based time factors; exposed gameplay through 10 REST API endpoints.
- Developed four cumulative-profit league tiers—NPC, VALID, MAIN, and GOAT—with dashboard analytics, a top-20 leaderboard, and TradingView chart integration; containerized and deployed on Render.

Technical Skills and Interests

Languages:	Python, Java, JavaScript, SQL
Developer Tools:	Git/GitHub, Docker, AWS
Frameworks & Libraries:	React.js, Django, Django REST Framework, FastAPI
Databases:	MongoDB, PostgreSQL
Testing:	Postman, pytest
Areas of Interest:	Full Stack Development, AI Engineering

Certifications & Achievements

- Selected among the top teams during the internal selection round for Smart India Hackathon (SIH).
- **Basics of Python** — *Infosys Springboard* (Jun 2025)
- **AWS Certified Solutions Architect Associate 2022** — *Infosys Springboard* (Course Completion, Sep 2026)
